Jarvis

Jarvis **cuts the fees** and delivers **interoperability** to remove the pain of having multiple accounts for managing one's finances

An unique account for your finances

Jarvis is an infinitely scalable financial hub which bridges, connects to, and makes interoperable, multiple centralized and decentralized application, financial services, products and markets. **Users can customize their own hub to manage their finances at almost no cost with a single account**, from payment to trading, to saving, to lending, etc.

Technology framework

The building block of Jarvis is a **Web3 wallet** leveraging from escrow functions. Through open APIs and decentralized protocols, it connects to several centralized and decentralized applications, including our **hybrid exchange and broker.**

- Have full control over your funds and data
- Manage fiat, crypto and digital asset with a payment and fiat gateway
- Assets can be utilized as medium of payment, or collateral
- Access multiple financial services through partners Apps and Dapps
- Trade multiple financials products such as Fx, leveraged cryptos, stocks etc.
- Instant cross-chain and cross-asset class exchange

Go-to-market strategy

Designed to abstract the technology to **let everyone to derive value** from it, the **mobile app** focuses on daily finances activities, while the **desktop and the web app** focus on trading.
.

Mobile app
Launch Dapps, manage funds, make fiat payment, exchange asset, instant credit etc.

Web/destkop app
A customizable interface with innovative tools to trade multiple financial markets and products.

AI is the new UI...

+

Users can trigger the **AI assistant** from the + button to provide an innovative manner of interaction: it can help automate tasks or ease navigation.
Users can write or speak any command, from opening a chart to sending money to a contact.

Jarvis Reward Token (JRT)

JRT are distributed monthly to reward users who contribute the most to company growth. JRT grants access to the DAO, which organises bounty and airdrop campaigns to foster user acquisition. As a partner, the DAO receives **25% of the ecosystem's revenus (exchange, brokerage, fiat and payment gateway, partnerships) and shares it between JRT holders.**

The one who build

Developers who are building extensions receive tokens according to the success of their work.

The one who add value

Partners, users and developers who bring more users and value to the ecosystem.

Problems solved

- Data and funds are scattered among multiple applications, complicating users journey, and being at risks. Users have to juggle between traditional and digital, centralized and decentralized world.

- Decentralized apps suffer from unfamiliar processes preventing mass usage, like seed phrase, gas, non-human readable addresses etc.

Team

The team have different skills and experiences from different backgrounds.

The founders are famous traders (Pascal Tallarida **in Click**) with a +21k trading community and former brokers top executive (Cyril Tabet **in Click**). The team is comprised of developers passionate about decentralization, people who have worked in charity and social impact or who have led projects in Uber.

Milestone

- 1.2M dollars raised among our community of early adopters and testers.

- Launch of two prototypes of the trading platform and of the mobile wallet.

- Brokerage and payment license acquired.

- Partnership with Daneel, to onboard their AI-based assistant and power Jarvis.

- Partnership with Celsius to create a saving account within Jarvis and pay interest on users deposit.

Token scarcity and velocity

- 420M tokens

- Grant access to the DAO

- Distribute a revenue

- Buying back and burning program

- Unsold token burnt
